

# Using Digital Hotcakes Transitions with Track Mattes in Sony Vegas Pro

## 1. Import your videos/pictures, transition clip, and transition matte

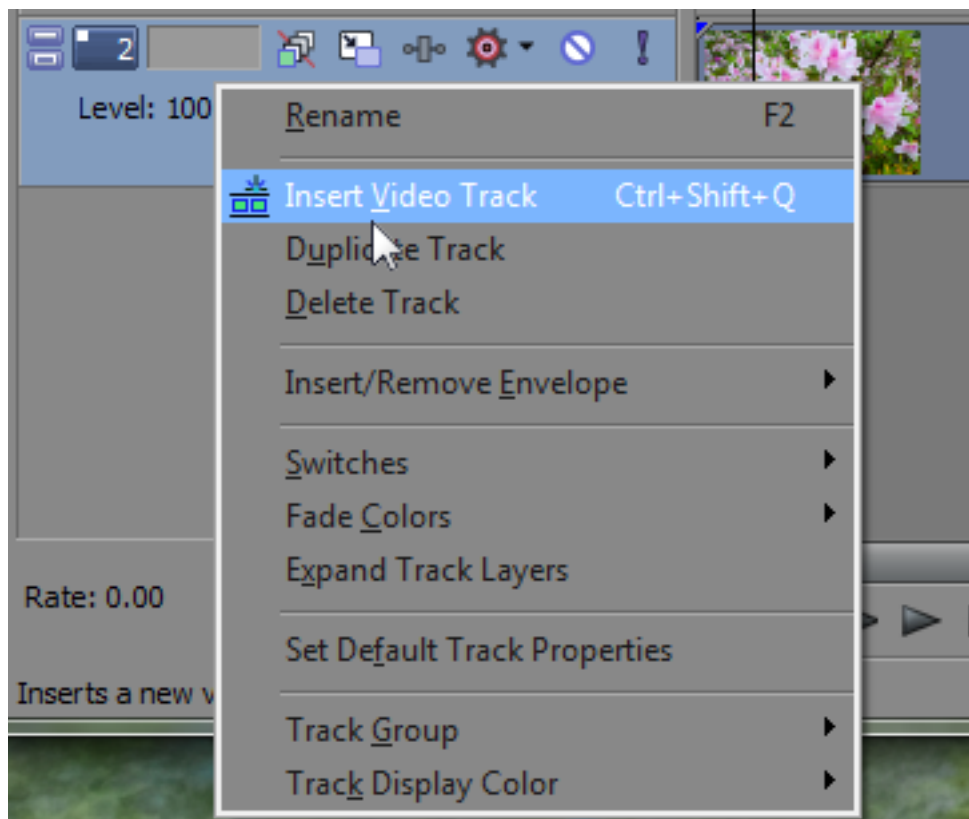

## 2. Drag incoming (B) video/picture to track 1 and outgoing (A) video/picture to track 2.

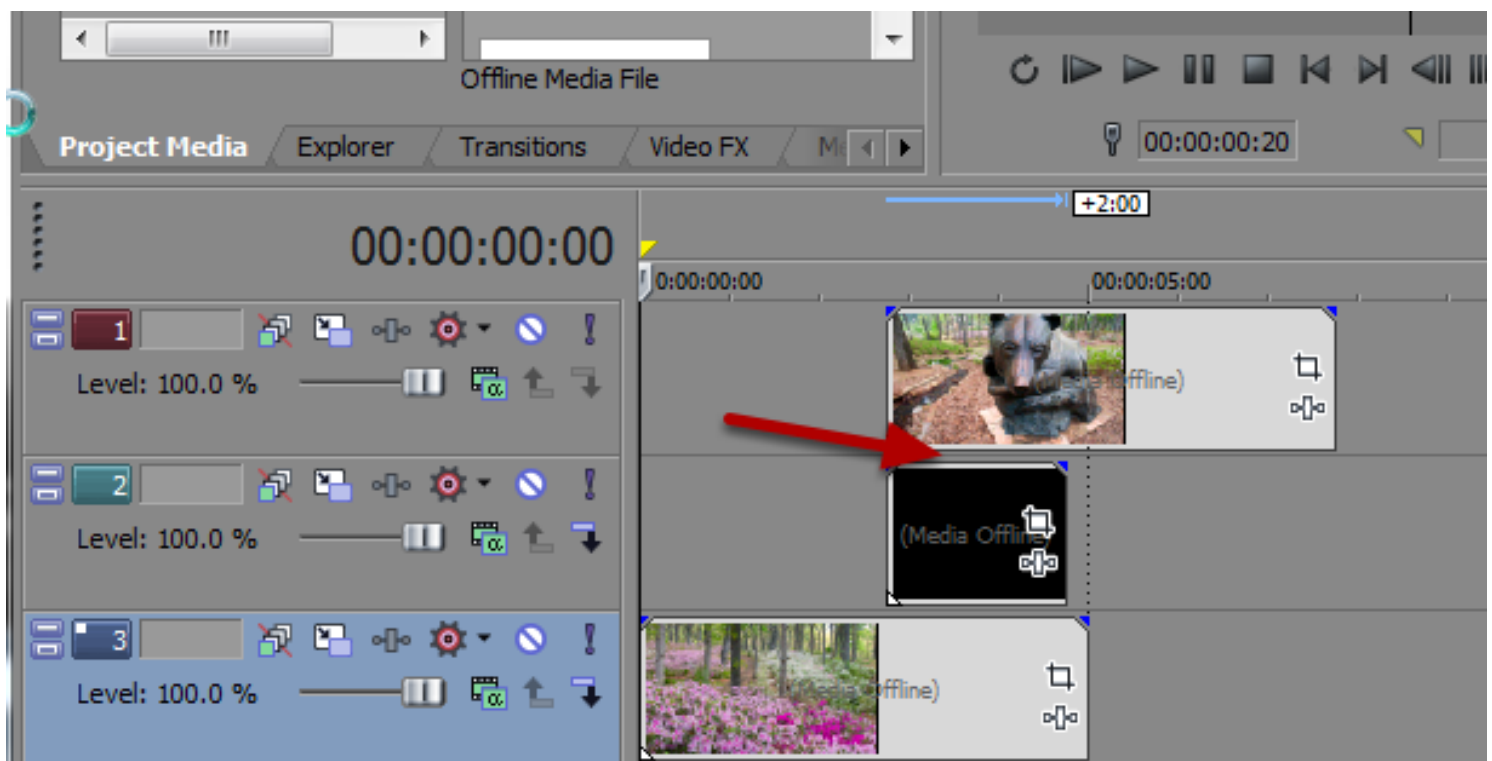

Make sure you have some overlap.

### 3. Insert video track between the clips.

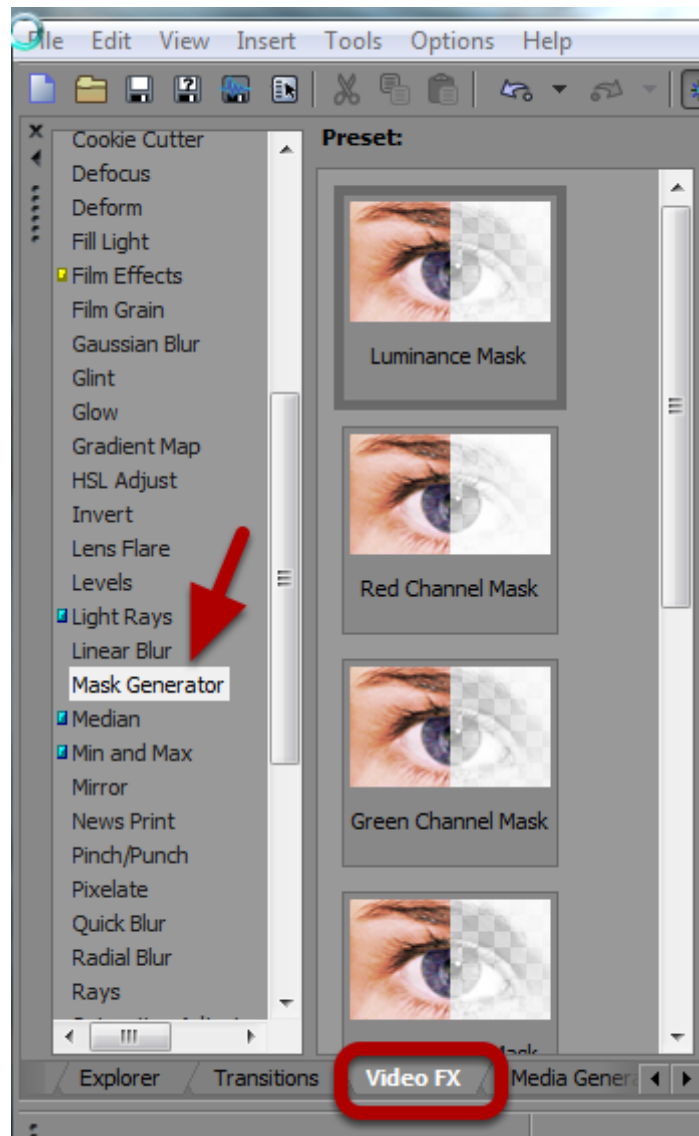

Select video track 2. Right mouse click to bring up menu to Insert Video Track.

### 3. Drag transition matte to new track.

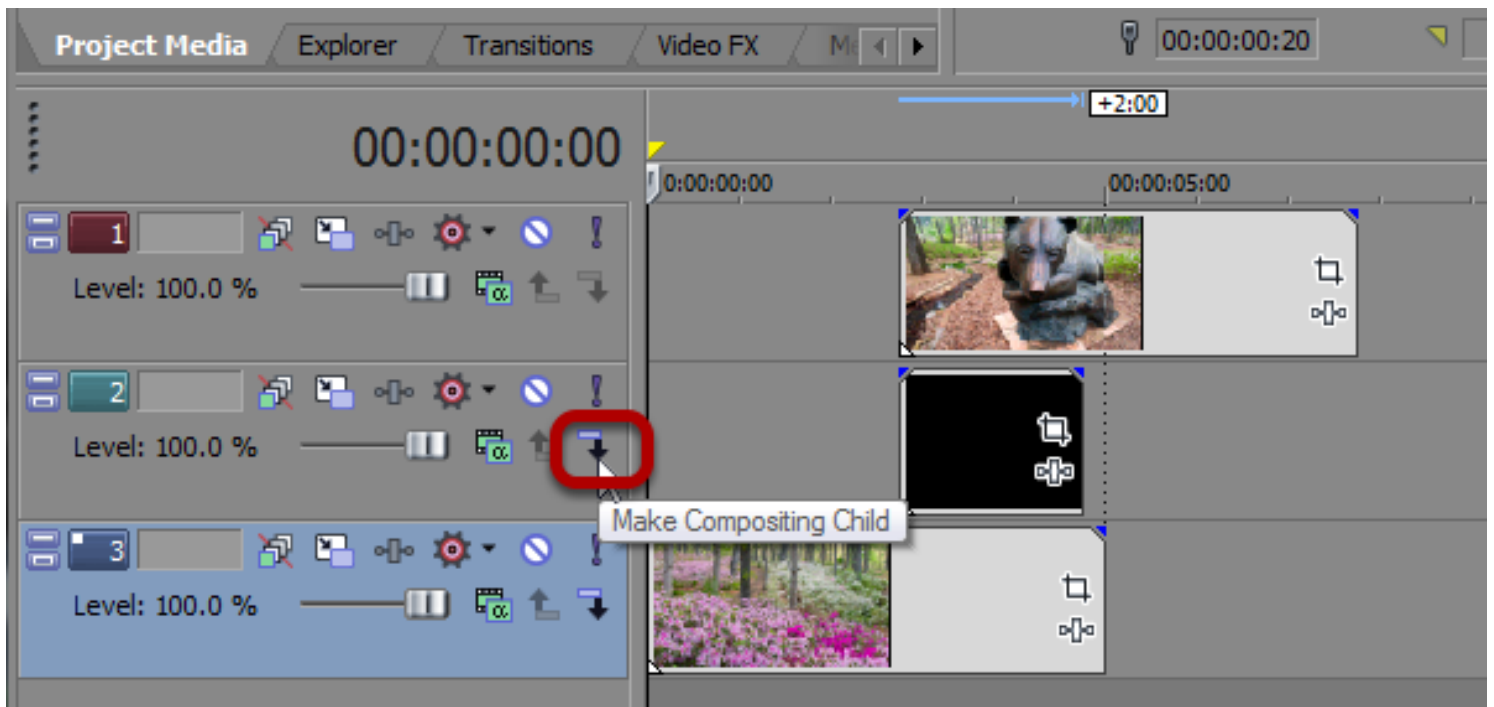

#### 4. Add Mask Generator to this track with Luminance type

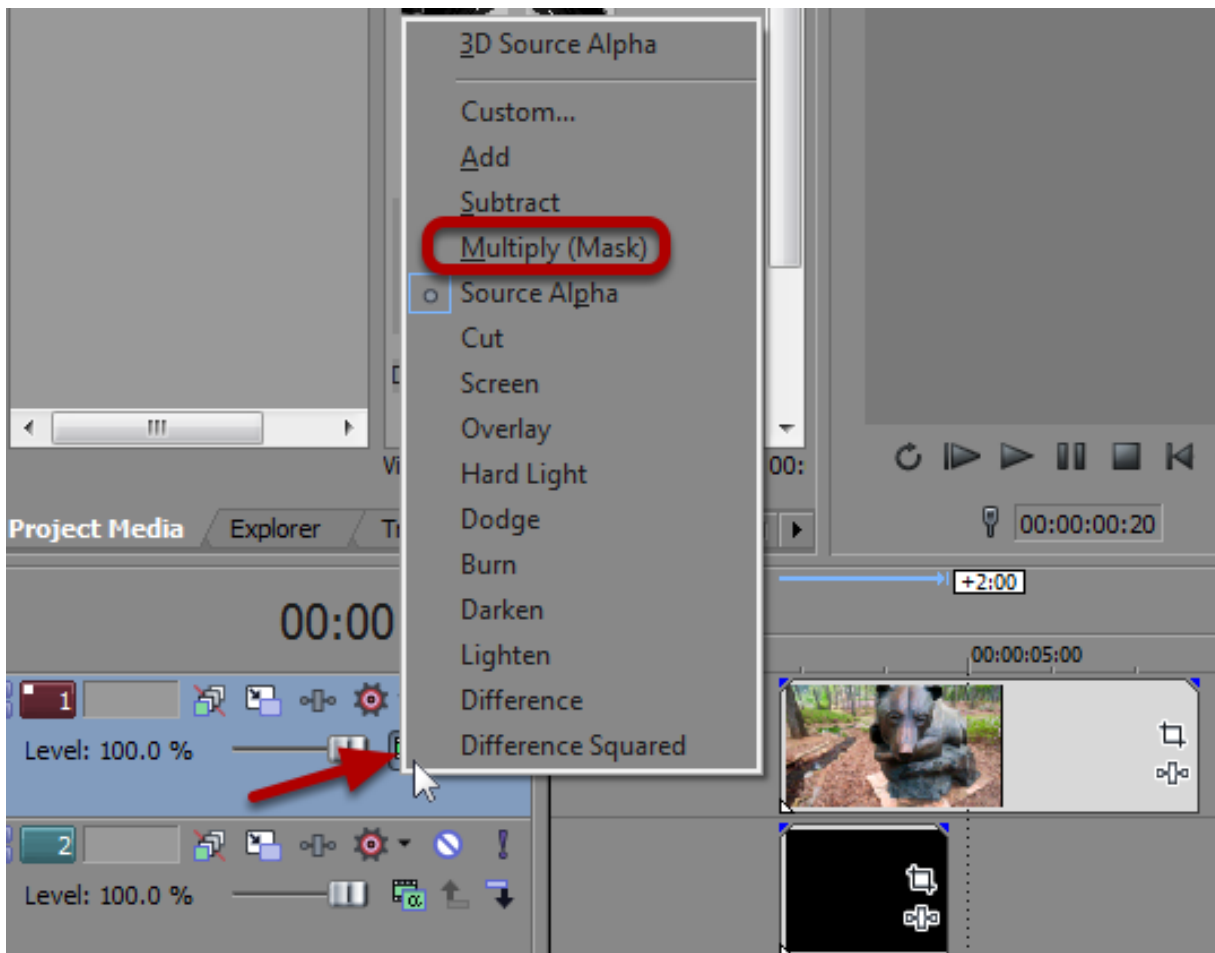

Drag this FX to the transition matte. When Video Event FX box appears select type Luminance.

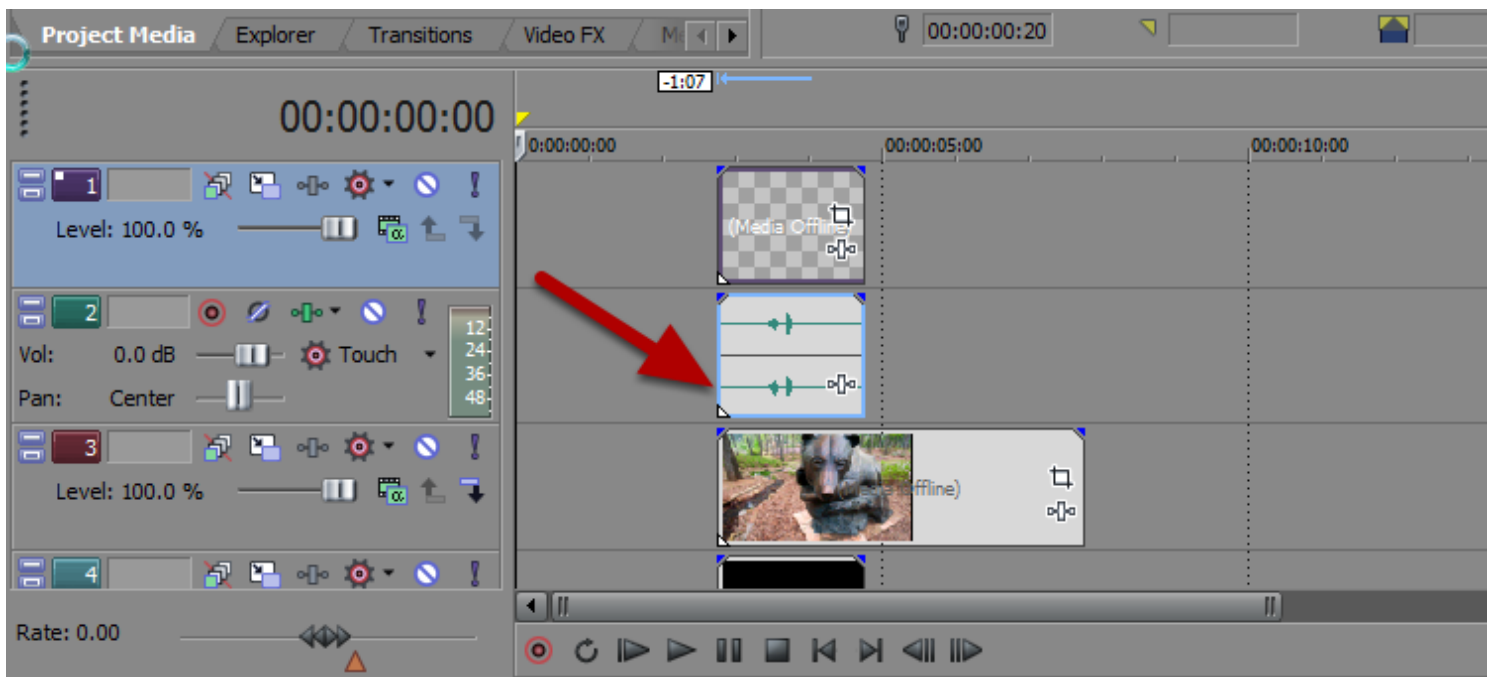

## 5. Click on Make Compositing Child Button

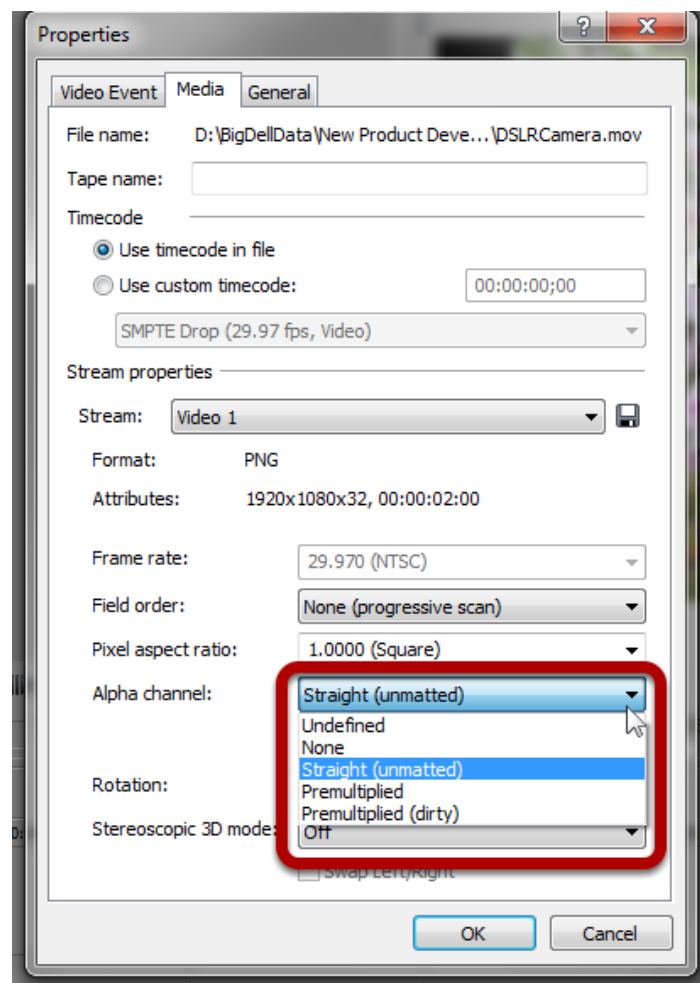

## 6. Set the incoming clip's composite mode to Multiple (Mask)

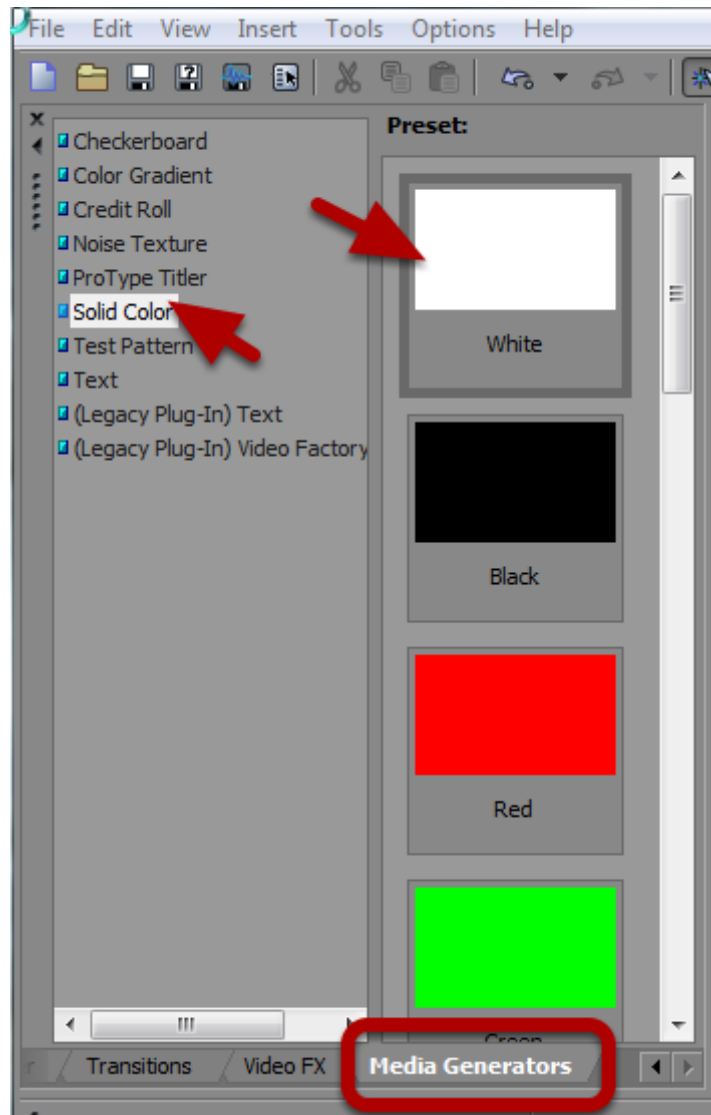

## 7. Add transition clip above the incoming track in line with the transition matte.

## 7. Bring up Properties for transition clip and set alpha channel to straight

## 8. Use Media Generator to create Solid White Clip

**9. Drag White clip to end of track matte and trim down to length of incoming clip.**
