

Here's how to convert a folder of Digital Hotcakes quicktime movies to AVIs using Adobe Premiere Batch Processing.

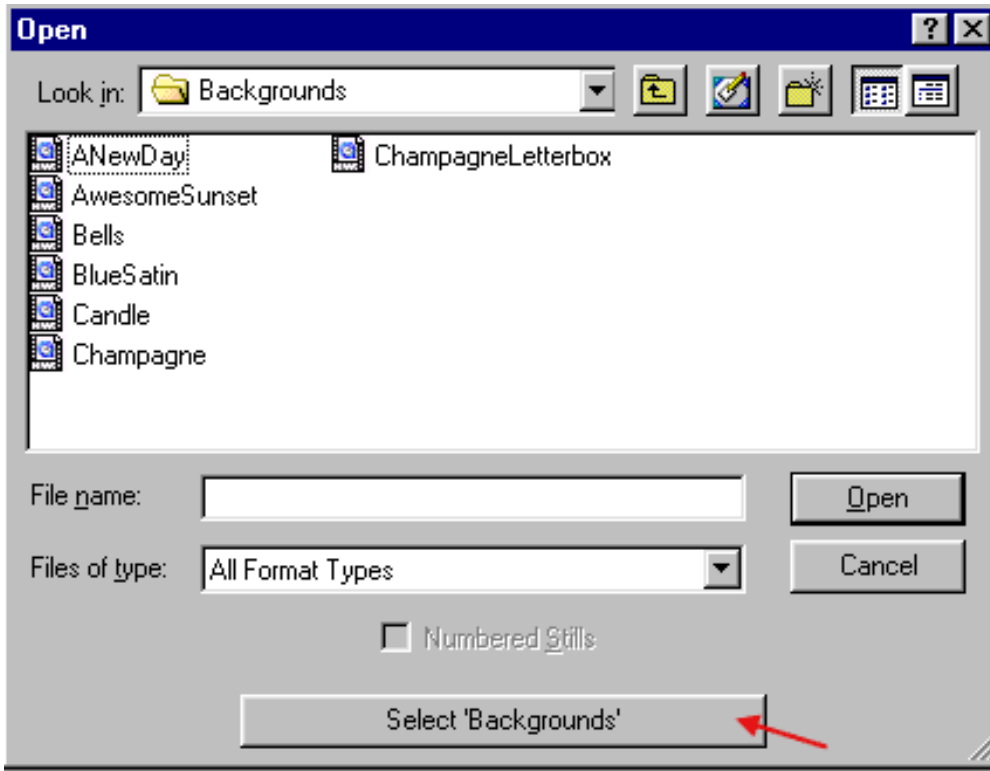

1. Start Premiere. Select Project>Utilities>Batching Processing

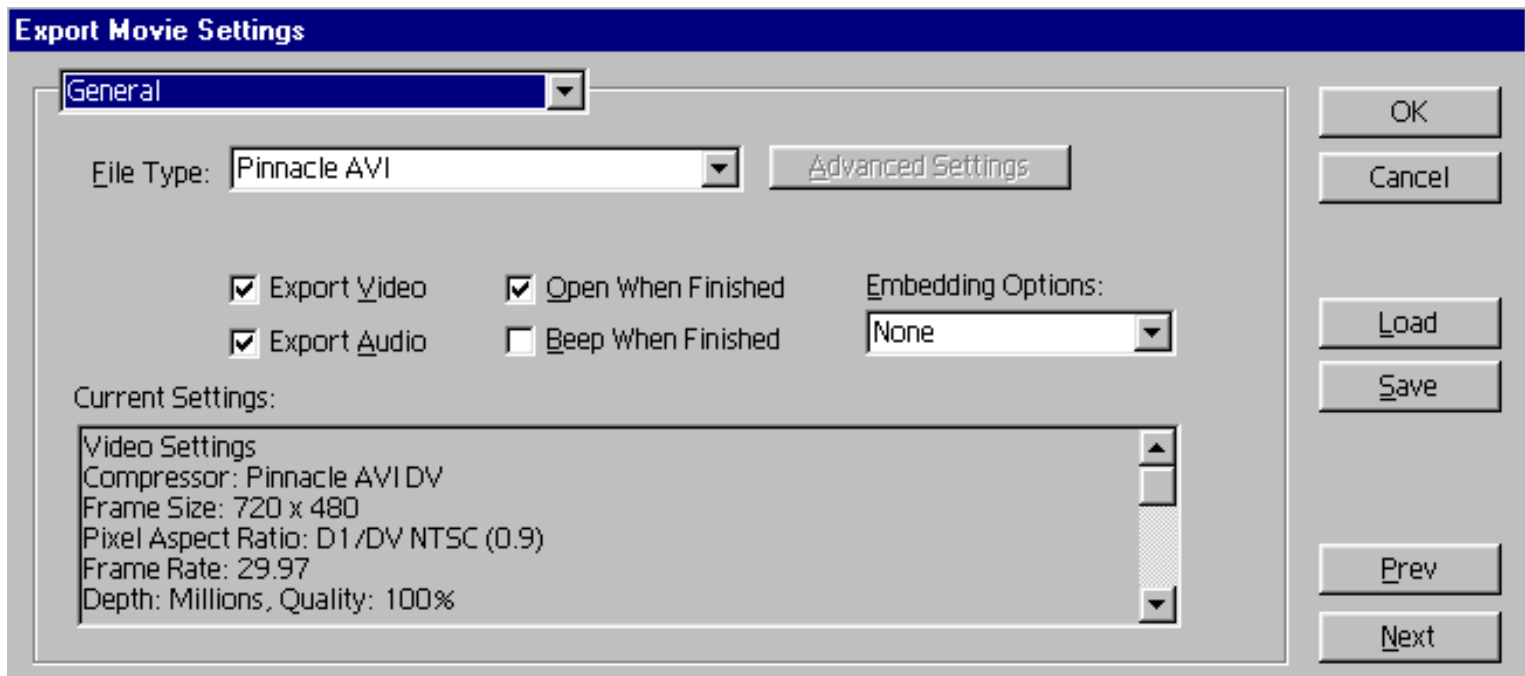

2. Click on ADD button.

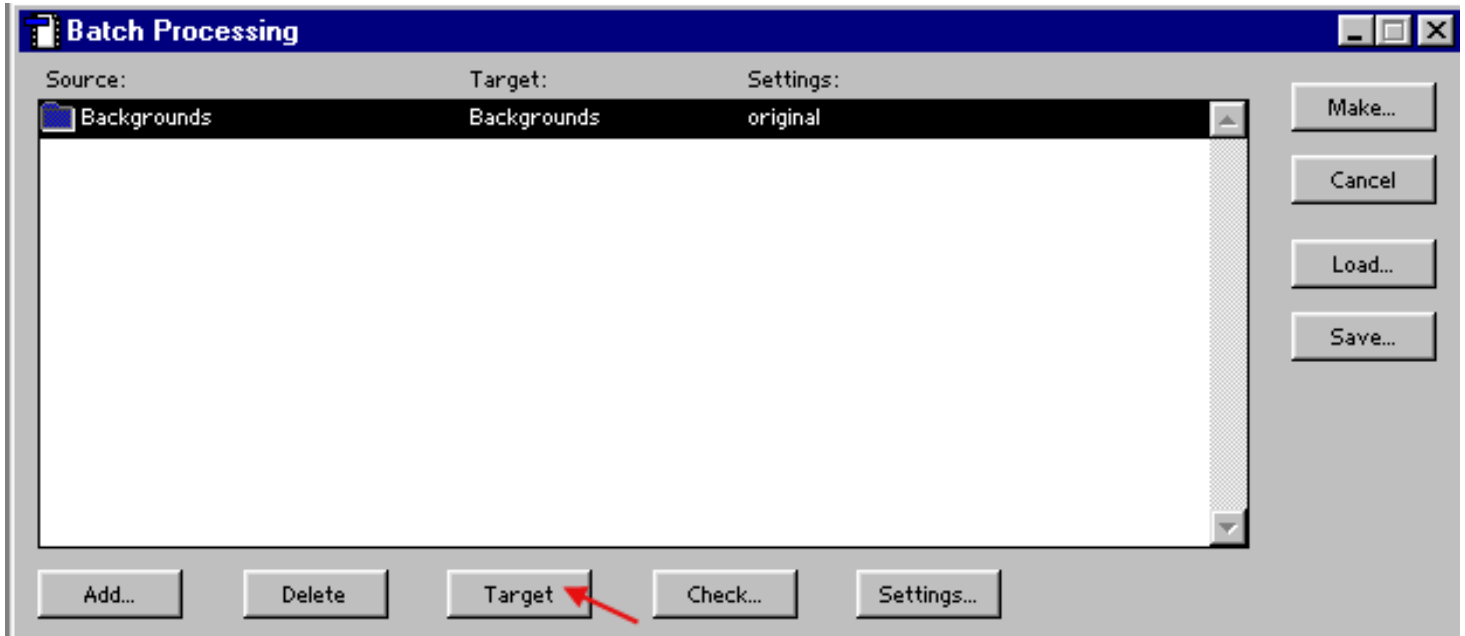

3. Find your CDrom drive. We've inserted Wedding Essentials Volume 1 CD 1 in our CD drive. Select Backgrounds folder. Click on the Select Backgrounds button.

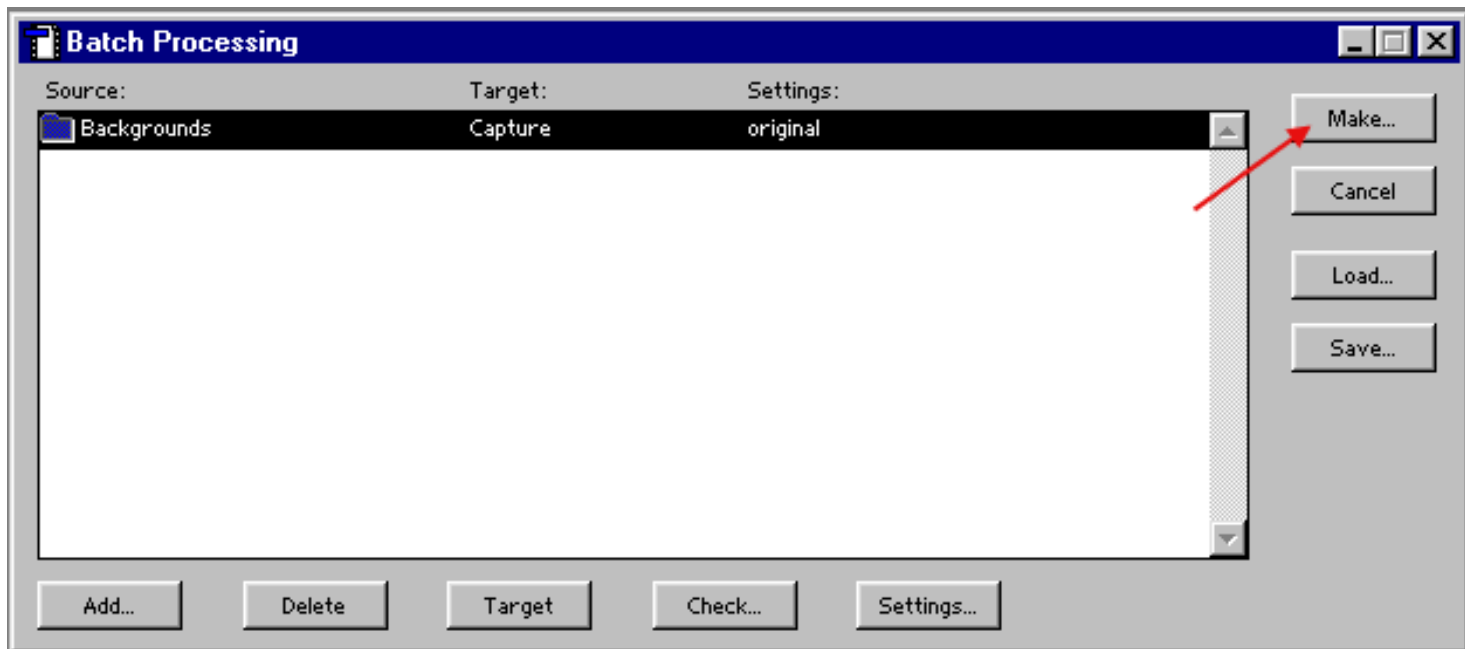

4. The Export Movie Settings window comes up. Set the settings to your appropriate AVI settings.

5. Click on the Target button to set the output to a folder on your hard drive.

6. Click on Make button. Process can take several minutes. When it is done, you will have a folder of AVIs created and named after the Backgrounds folder you selected in step 3.
