

## Here's how to use Digital Hotcakes Wipes in Adobe Premiere.

1. Start Premiere, and import your footage (2 clips), and a Hotcakes wipe. We used BouquetWipe from Wedding Essentials Volume 1 CD 1 in the TGA Overlay folder.

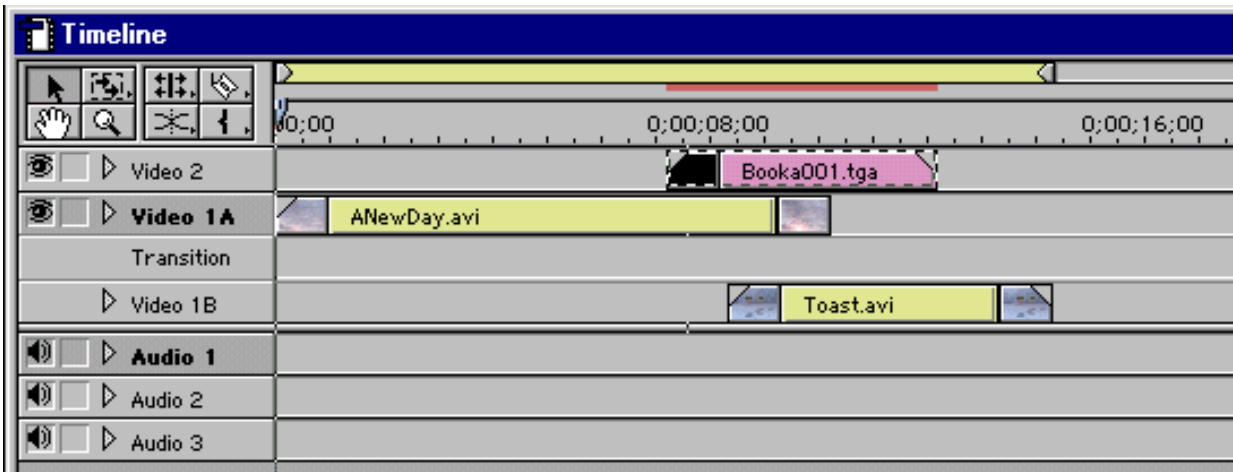

**NOTE:** Copy all Digital Hotcakes animations from CD or DVD to your video hard drive before importing them.

2. When importing BouquetWipe, be sure to put a check mark in the Number Stills box.

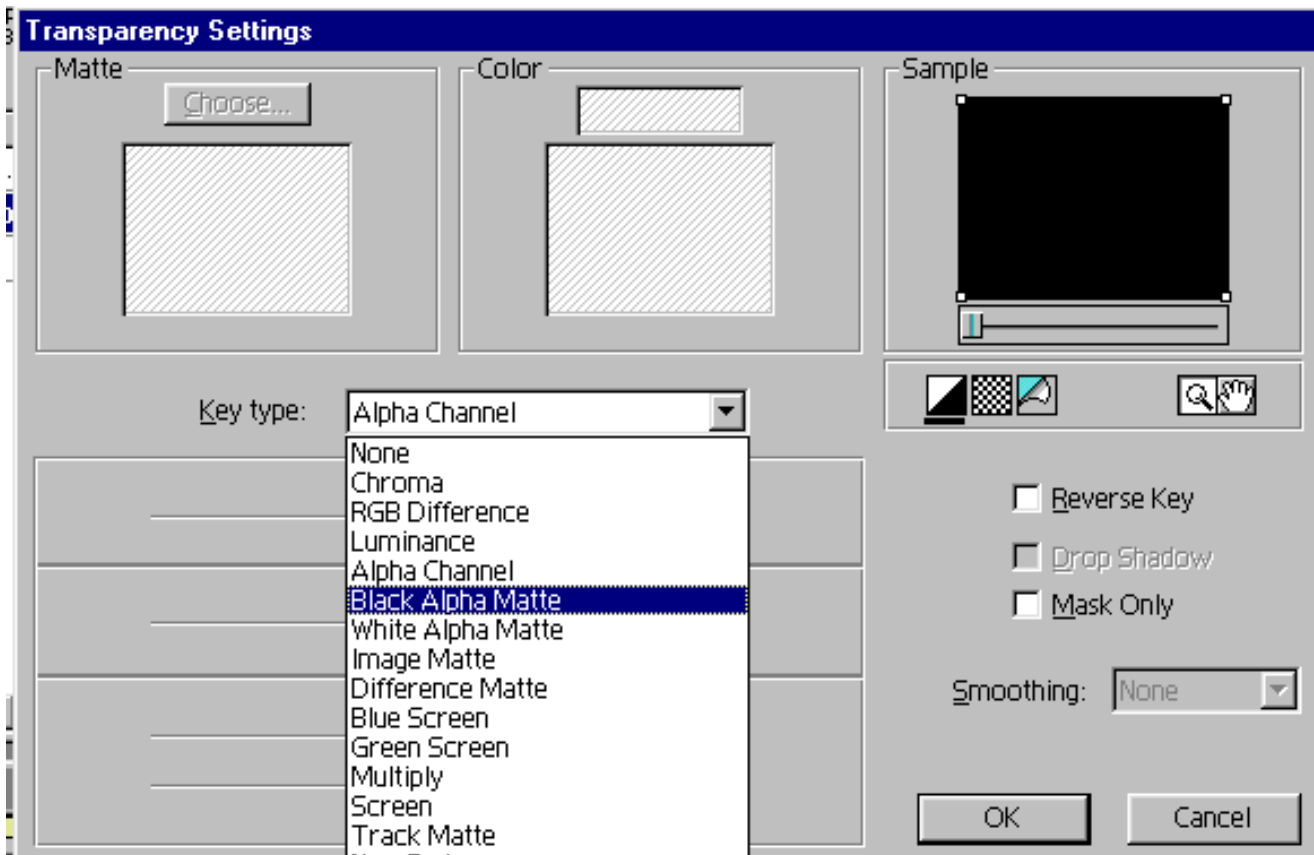

**3.** Drag your first clip to Video Track 1a and your second to Video Track 1b allowing about a 2 seconds of overlap.

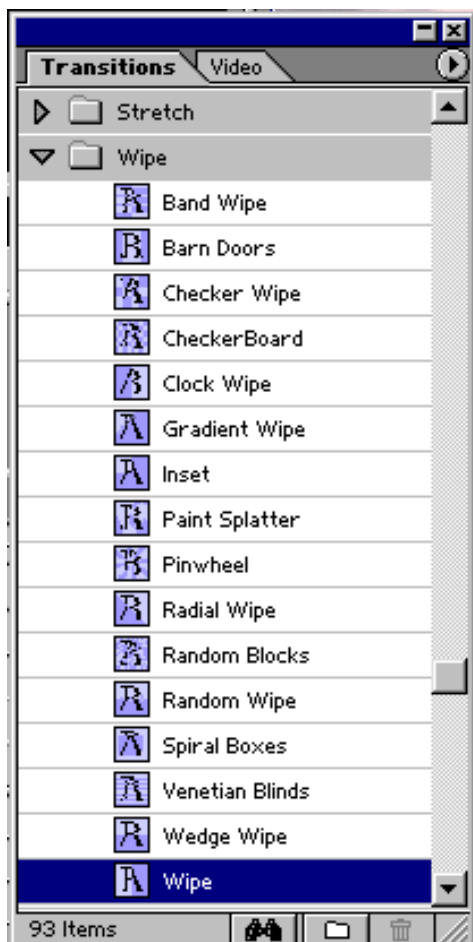

**4.** Drag BouquetWipe to Video Track 2 just above the overlap area.

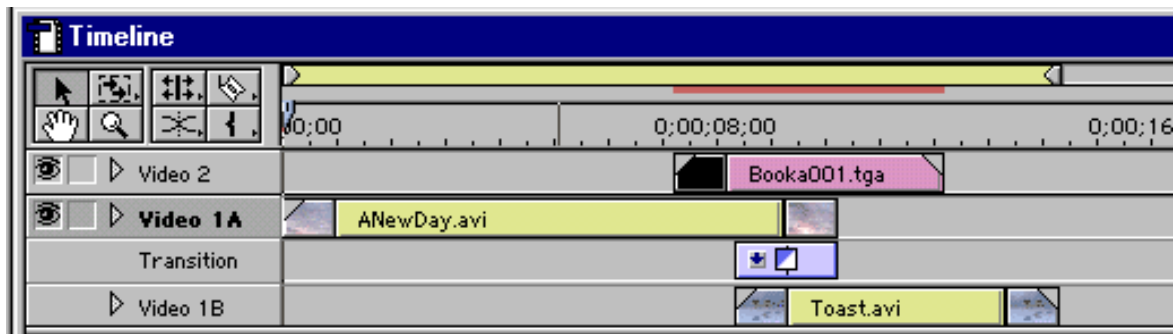

**4.** Right click on the BouquetWipe to bring up Video Options>Transparency. Set Key Type to Black Alpha Matte.

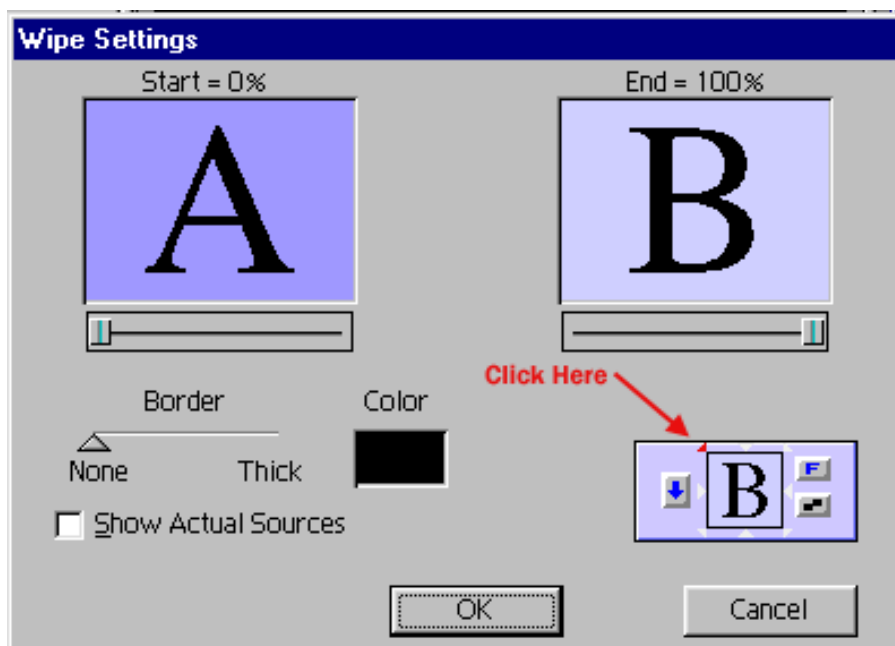

5. Select the Wipe transition from your Transition window under Wipe.

**6.** Drag the transition to the transition track between Video 1a and Video 1b.

**7.** Double-click on the transition clip to bring up the Wipe Settings. Click on the upper left white arrow which sets it to red and makes the wipe a diagonal wipe from the upper left corner. Click the OK button.

**8.** Here's a trick to preview without rendering. Press your ALT key while left mouse dragging the time line scrubber. This will allow you to see a preview while you are scrubbing.

**9.** You might need to move the BouquetWipe clip to get the desired timing of the diagonal wipe.
